

US006052480A

United States Patent [19]

Yabuki et al.

[11] **Patent Number:** **6,052,480**[45] **Date of Patent:** **Apr. 18, 2000**

[54] **PATTERN RE-RECOGNIZING TABLE GENERATING DEVICE AND PATTERN RECOGNIZING DEVICE TO IMPROVE A RELIABILITY FOR A RECOGNITION OF A PATTERN OVERLAPPING OR INTERSECTING A LINE IN AN IMAGE**

[75] **Inventors:** Maki Yabuki; Satoshi Naoi, both of Kawasaki, Japan

[73] **Assignee:** Fujitsu Limited, Kawasaki, Japan

[21] **Appl. No.:** 09/228,139

[22] **Filed:** Jan. 11, 1999

[57] ABSTRACT

A character box extracting unit extracts a line forming a character box. Then, the character box intersection calculating unit calculates the intersection of the character box with a character pattern. An intersection corresponding unit associates intersections with each other based on the directional property of character lines, distance between the character lines, etc. An in-box character extracting unit extracts a virtual image according to the association information between the intersections. A character size evaluating unit obtains from an optional character string an average character size of a character including the virtual image, and extracts a true character pattern by removing a redundant virtual image based on the average character size. A character structure analyzing and evaluating unit obtains from a prepared table a true image corresponding to the virtual image and extracts a true character pattern, thereby correctly extracting the pattern from the image in which the line crosses the pattern.¹¹
